

Learning Resources

Item 2 of 4

Download the following documents from BrainstormRTO

- **Learning Resources Mapping Matrix** template

You have now completed your mindmap. This process has helped you unpack the requirements of the Unit of Competency, identify your target learners and their characteristics, identify any additional advice from the learning support specialists and also consider the feedback from industry.

Before you start to build your session plans, you need to identify any existing learning resources that are available to you, and then evaluate their suitability.

To ensure the identified resources are appropriate for this unit - you will complete a Learning Resources Mapping Matrix.

This exercise will also help you identify where you might have gaps in the learning.

Steps to complete the Learning Resources Mapping Matrix.

1. Locate the unit of competency you have selected on training.gov.au.
2. Using your **Learning Resources Mapping Matrix** edit this document to populate the components of the unit. (this content is copied from training.gov.au)
3. Map any resources that you plan to use in your training delivery on the mapping matrix. This will include PowerPoint slides, handouts, learner guides, videos, etc...
4. Note: - you won't map anything to the learning activities yet - you will revise the mapping after you have completed the **Delivery and Session plans** for your three (3) sessions
5. Ensure you have included any equipment and resources listed in the Assessment Conditions of the unit.

Save your **Learning Resources Mapping Matrix** - you will update this again after you have completed the **Delivery and Session Plans**.

Now that you have identified and evaluated the suitability of existing learning resources, answer the following questions. (Refer to the list of suggested resources you are already aware of)

Do you have sufficient learning resources for your training delivery?

Enter a response here

Do you think these resources are suitable for the learners - explain why?

Enter a response here

What additional resources would be helpful?

Enter a response here

How would you access the additional resources if needed?
